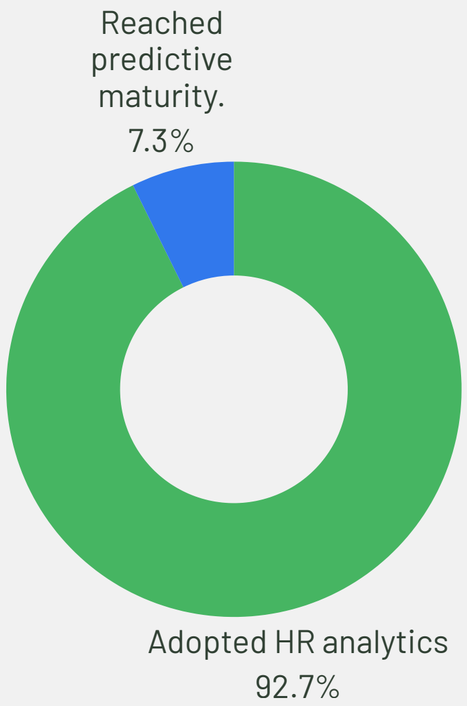
What is HR Analytics?

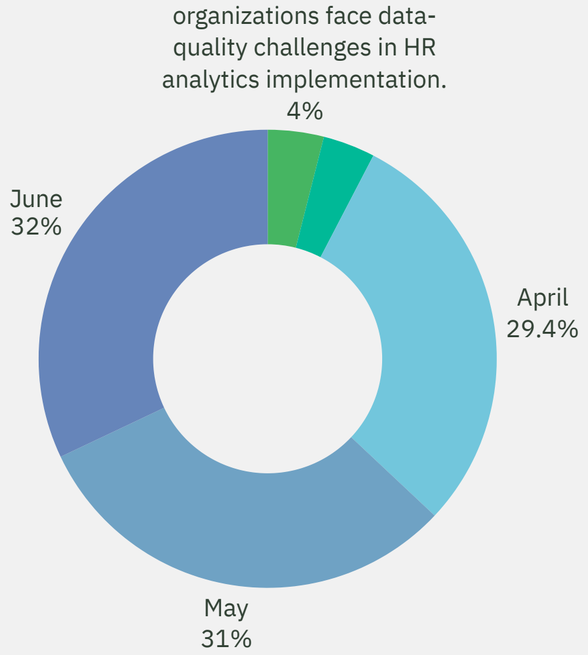
HR analytics (also called people analytics or workforce analytics) is a data-driven approach to human resources where organizations use employee data to understand, predict, and improve workforce performance and HR decisions.

HR ANALYTICS ADOPTION STATUS



- HR analytics is the use of employee data to improve decisions in hiring, retention, engagement, and workforce planning.

Faces Data Quality Issues



Benefits of HR Analytics

Highly engaged workplaces see a 41% reduction in absenteeism

Targeted retention programs have reduced voluntary turnover in 37% of companies in one 2025 summary.

Highly engaged teams show a 17% increase in productivity.

Overall workforce structure remains balanced

Balances cost efficiency, flexibility, and organizational stability across employment types.

Future of HR Analytics :-

Organizations already use AI for turnover prediction.

34%

AI-based turnover prediction can show

75% - 89%

By 2030, 94% of organizations are expected to use AI-powered people analytics

HR Technology Usage :-

HR technology (often called “HR tech”) refers to the digital tools, software, and platforms that organizations use to manage people, data, and processes across the employee lifecycle—from hiring to exit. It sits at the intersection of HR, data, and information systems, and is now a core part of modern HR and business-analytics strategies

Key HR Metrics

Employee turnover rate.

Turnover rate considersboth voluntary exits (resignations) and involuntary exits (terminations, layoffs) over a specific time (e.g., month, quarter, year)

Time to hire

It tracks one candidate's journey: from their first contact with the company (application or recruiter outreach) to the day they say "yes" to the offer.

Employee engagement or eNPS

Employee engagement measures how emotionally and mentally connected employees feel to their work and organization, while eNPS (Employee Net Promoter Score) is a simple metric work.

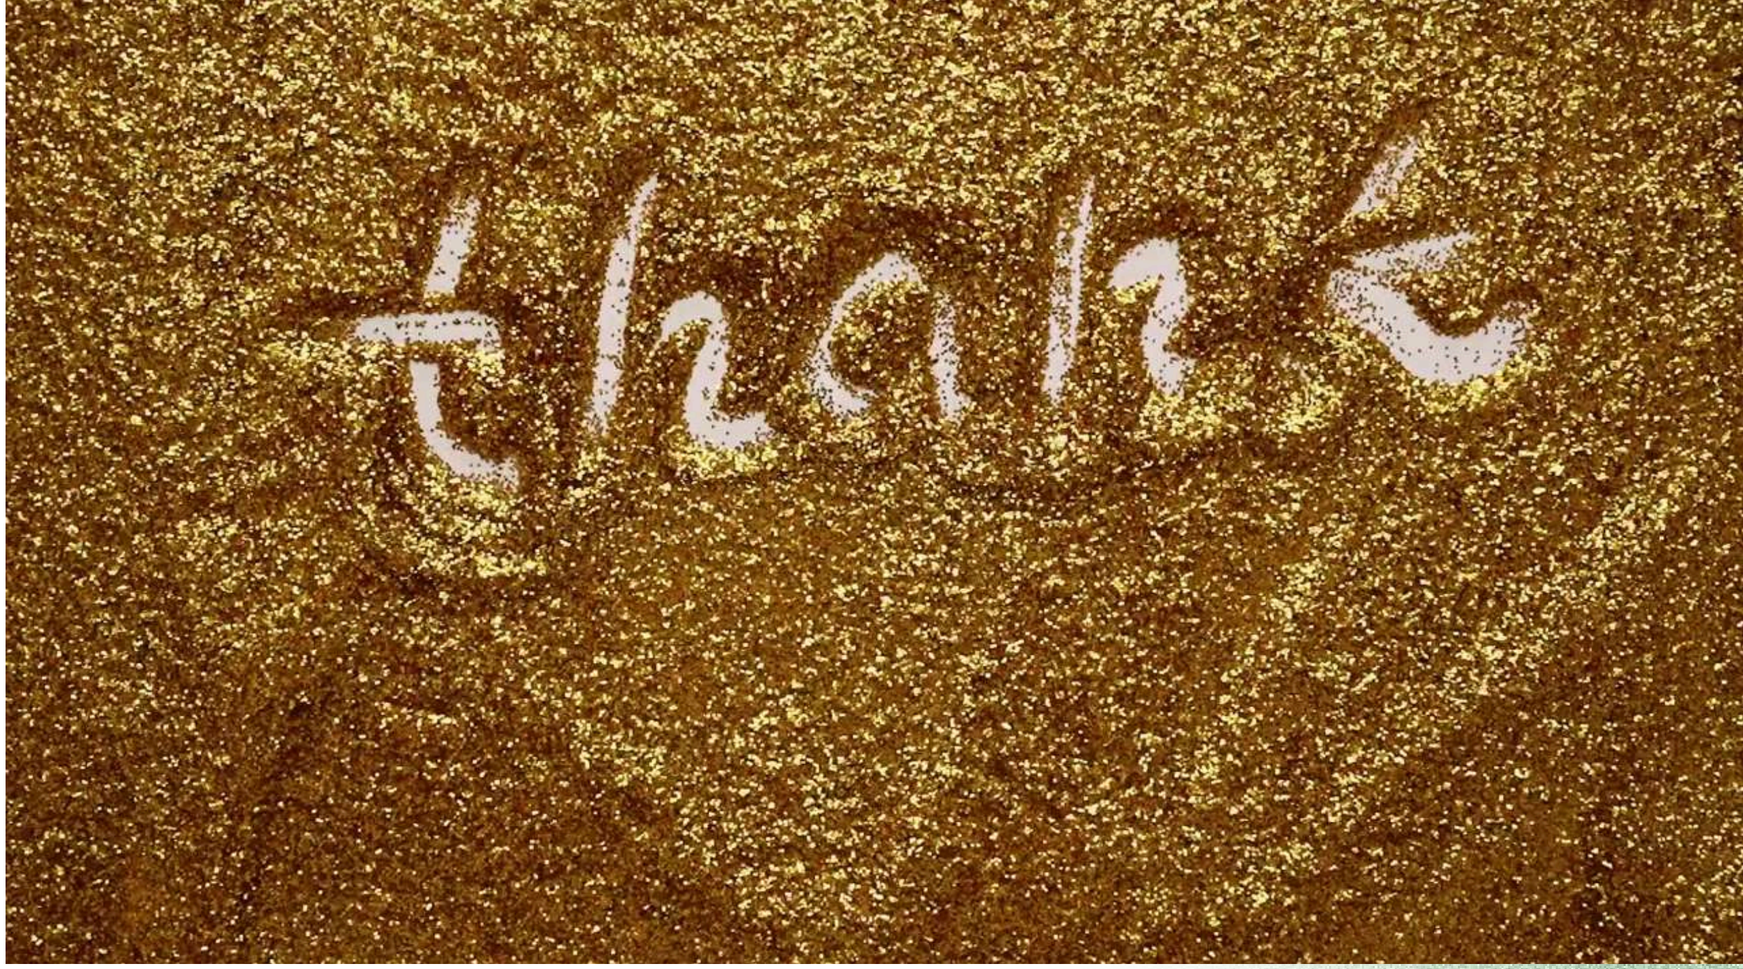
Cost per hire

Cost per hire is a recruitment metric that measures the average amount of money an organization spends to fill one vacancy over a given period.

Conclusion -

- HR analytics helps companies make smarter HR decisions
- It improves hiring, engagement, retention, and planning
- In modern organizations, HR analytics is becoming an essential strategic tool

“Right data leads to right people decisions.”



Thanks
